

GUNJAN SOLANKI

Senior Software Engineer | Full-Stack | Cloud | AI-Augmented Development

Dewas, MP 455001 • +91 77480 20946 • gunjansolanki2210@gmail.com • [LinkedIn](#) • [GitHub](#) • [Medium](#)

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience designing, building, and scaling distributed full-stack systems across fintech, real-estate, RPA, and SaaS domains. Deep expertise in **Ruby on Rails, React.js, GoLang, and PostgreSQL**, with hands-on experience operating cloud-native microservices on **AWS, Docker, and Kubernetes**. Proven track record of API gateway standardization, observability, performance optimization, and shipping AI-augmented developer workflows using **Claude, Cursor, Kiro, RAG, LangChain, and LangGraph**. Effective technical leader who mentors engineers, drives Agile delivery, and partners with product and DevOps to ship reliable software at scale.

TECHNICAL SKILLS

Languages: Ruby, GoLang, JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3

Frameworks & Libraries: Ruby on Rails, React.js, Next.js, Node.js, Sidekiq, ActiveAdmin, RSpec

Cloud & Infrastructure: AWS (EC2, S3, SQS, SNS, Lambda, RDS, VPC, NAT Gateway, CloudFormation, CloudWatch, IAM, Inspector), Docker, Kubernetes, Firebase

API & Microservices: AWS API Gateway, REST, gRPC, OpenAPI/Swagger, GraphQL, JWT/OAuth2, Rate Limiting, Distributed Tracing (OpenTelemetry, Jaeger)

Databases & Caching: PostgreSQL, MySQL, Redis, Elasticsearch, MongoDB

DevOps & Observability: GitLab CI/CD, GitHub Actions, Grafana, Prometheus, Sentry, SonarQube, Rollbar

AI / LLM Tooling: Claude, Cursor, Kiro, GitHub Copilot, MCP Servers, RAG pipelines, LangChain, LangGraph, OpenAI / Anthropic APIs, Vector DBs (pgvector, Pinecone)

Practices: Microservices, System Design, TDD, Agile/Scrum, Code Reviews, Performance Optimization, SOC2 Compliance

Integrations: Google APIs, SendGrid, DocuSign, Zoom, Stripe, Mattermost

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Jul 2025 – Present

VConstruct Pvt Ltd • Vueops (Facility Management Platform)

Noida, India

- **Implemented AWS API Gateway** across the microservices fleet to centralize traffic routing, authentication, and TLS termination, eliminating ad-hoc service-to-service routing and improving request reliability.
- **Rolled out distributed tracing** (OpenTelemetry + Jaeger) and **rate limiting** policies at the gateway layer, cutting mean time to debug cross-service latency issues by ~50%.
- **Drove API standardization** across services by adopting **OpenAPI 3.0 specifications**, auto-generated Swagger docs, and contract validation in CI to enforce consistency for mobile and web consumers.
- Engineered high-performance REST APIs powering the Vueops mobile platform and authored comprehensive Swagger documentation used by internal and partner teams.
- **Remediated security vulnerabilities** surfaced by AWS Inspector and ECR image scans, contributing materially to the platform achieving **SOC2 compliance**.
- **Built AI-augmented developer workflows** using **Claude, Cursor, and Kiro** for feature scaffolding, refactoring, and end-to-end documentation generation.
- **Set up MCP servers** for Jira and GitHub Copilot, accelerating onboarding and reducing PR review and ticket creation time by ~35%.

Software Engineer (L2)

Nov 2022 – Jun 2025

Builder.ai

Remote / Gurugram, India

- Led design and development of **360, Scheduler, and Tracker** — internal delivery and operations platforms built on Rails + React, used by 200+ internal users across delivery, ops, and finance.
- Migrated legacy Redis-based messaging to **AWS SQS + SNS**, increasing async job throughput and stability by **40%+** and unlocking fan-out patterns across consumers.
- Implemented API optimization techniques — caching, N+1 elimination, and query batching — **reducing P95 latency by 30%** on hot endpoints.
- Productionized GoLang microservices for high-throughput background tasks, interoperating with the Rails monolith via gRPC and message queues.
- Hardened code quality through SonarQube, RuboCop, and parallel RSpec workflows; raised test coverage to 85%+ on core modules.
- Mentored 4 junior engineers, ran weekly sprint demos, and authored RCA reports for production incidents.

Senior Software Engineer

Mar 2022 – Nov 2022

Bacancy Systems • Client: Invoke (RPA Platform)

Ahmedabad, India

- Delivered secure, testable APIs and UI modules on Rails + React for a cloud-based Robotic Process Automation platform.
- Introduced service objects and DRY patterns that reduced regression bugs and improved code readability.
- Authored integration tests and performance checks, sustaining **95%+ release stability** across staging and production rollouts.
- Partnered with QA and DevOps on release planning and build validation.

Software Engineer

Sep 2019 – Mar 2022

Systango

Indore, India

- Built admin tooling, CRM, and real-estate workflows for **RACE Ecosystem** (blockchain-based real-estate platform) using Rails, ActiveAdmin, Sidekiq, and SendGrid.
- Integrated third-party services (DocuSign, automated email flows) to support scalable business operations.
- Contributed to **FTC Solar** by building interactive React components and Dockerizing services for CI/CD pipelines.
- Collaborated with QA on automated test suites and release-readiness reviews.

Software Engineering Intern

Jan 2019 – May 2019

Infosys Technologies

Mysuru, India

- Completed structured training in Python, MySQL, and object-oriented design as part of the Infosys onboarding program.

EDUCATION

B.E., Information Technology

2015 – 2019

Institute of Engineering & Technology, Devi Ahilya University — Indore, India

AWARDS & CERTIFICATIONS

- Recognized at Builder.ai for leading the internal migration to Builder Chat (communications platform).
- Quarterly Excellence Award at Bacancy Systems for delivering critical RPA modules ahead of schedule.
- Certified in Software Engineering Training, Infosys Technologies.
